ARGUMENTS CLOSE IN SPENCER CASE

Judge Diehl Will Render His Decision at 10 O'clock Saturday Morning.

AFTER FIVE DAYS HEARING.

Morning Session Today Occupied by Attorney H. A. Smith in the Closing Speech for Prosecution.

"I will render a decision in this case Saturday morning at 10 o'clock."

Such was the announcement of Judge C. B. Diehl at 11:10 o'clock this morning, in the matter of the preliminary hearing of Samuel G. Spencer, charged with a statutory offense against the person of Hannah Iva Wallace.

The morning session of the court was occupied by Atty. H. A. Smith, in a closing argument for the prosecution. Mr. Smith was special counsel in the Asst. County Atty. Aaron Myers made the opening address for the state shortly before noon yesterday. He was followed by Adam A. Duncan for the defense. The latter, who had not finished when the midday recess was taken, resumed speaking at 3 o'clock, after which Atty. E. A. Wedgwood occupied the remainder of the session summing up of the case for de-

The hearing has occupied the atten The hearing has occupied the attention of the criminal division of the city court for a period of five days, beginning Friday, Sept. 3. Many witnesses have been examined, about an equal number on each side, and the case has been strenuously fought proand con, attracting to the court the attendance of many persons.

COAL CASE GOES OVER.

When the case of the United States When the case of the Dinied states against the Utah Fuel company came up for hearing before Master in Chancery S. H. Lewis this morning an adjournment was taken until Monday. Jan. 20, at which time the taking of testimony will be resumed.

HUSBAND WANTS DIVORCE

E. B. Parsons has commenced action for divorce from Ione Parsons, alleging desertion. They have been married more than 20 years and have two children, of which Parsons asks the custody.

SUES BROWN ESTATE.

Dr. E. W. Whitney has brought suit in the Third district court against Max Brown as administrator of the estate of former Senator Arthur Brown to re-cover judgment for \$325 for pernsoal

REMODELLING K. O'B.

The second floor of the Kelth build ing is "all torn up" and the occupants of the offices have disappeared, in the remodeling of the premises for occupancy by the dry goods firm. Some of the tenants are finding it "hard lines" in securing other quarters, and they are not taking much consolation in the completion this spring of the Railroad Exchange buildin, as it is reported that practically all of the buildings is spoken for, However, there will be plenty of room when the Newbours. be plenty of room when the Newhous-buildings are finished. The steel work is now up to the sixth and seventh stories of these latter structures.

TRIBUTE TO GEO. L. CHASE.

Heber J. Grant Intimately Acquainted With Deceased Insurance President.

The dispatches last night chronicled the decease at Hartford, Conn., of Geo. Chase, president of the Hartford Fire Insurance company. Mr. Chase was well known in this city, by the leading fire insurance companies here, and his death is felt by many as a personal as well as a loss to the business and financial world.

President Heber J. Grant of the Hom

Fire of Utah was intimately acquainted with President Chase. In speaking of the latter's demise this morning, President Grant said, that there was no greater friend to Utah in the eastern financial world than had been George L. Chase. Of the people of this state, Mr. Chase had said to Mr. Grant, that the dealings of the people gave him such confidence in their business integrity, that he considered the moral hazard of fire risks here to be less than any other place in the country.

Of Mr. Chase as a man, President Grant said: Fire of Utah was intimately acquainted

Grant said:

"He was of the highest honor and integrity in all of the walks of life, and was respected by all who knew him. He was a true and loyal friend. and when you were in his home you felt that you were in the home of an honest, kind, Christian gentleman.

"He was a glant in the insurance pro-fession, and as an evidence of the es teem and confidence reposed in Mr. Chase by the investing public, I will state, that after the San Francisco catastrophe, with losses of over \$10,-000,000 staring his company in the face, that they had such confidence in him that they bought \$750,000 of stock in

How Is Your Blood?

If you lack strength, are nervous, have no appetite, don't sleep well, get tired easily, your blood is in bad condition. You cannot be strong without pure, rich blood. Hood's Sarsaparilla makes good, rich blood and keeps it good.

Dyspepsia - "For six months my sys-tem was out of order with dyspepsia and impure blood. Spent lots of money in vain, but Hood's Sarsaparilla cured me." Jos. S. Zacua, Genea. Neb.

Had No Appetite — "I was troubled with dyspepsia and had no appetite. I had a faint feeling after eating. My constitution was all run down, but Hood s Sarseparilla has fully relieved me." FLORENCE STOWE, Spiderville, Wisconsin.

Weakness—"I bless the day I heard of Hood's Sarsaparilla, as it cured me of extreme weakness after grip, built my husband up after pneumonia, and cured eczema and bleod-poisoning in our children." Mrs. M. A. Delwortk, Box 4, Embreeville, Pa. Hood's Sarsaparilla is sold everywhere. In the usual liquid, or in tablet form called Sarsatabs. 100 Doses One Dollar. Prepared only by C. I. Hood Co., Lowell, Mass.

the Hartford, at a premium of 300 pe cent. By this sale, he increased the capital from \$1,250,000, to \$2,000,000 and increased his net surplus by \$3,000,000. "Mr. Chase was a captain of finance, as well as of insurance. Quite frequent-ly there are great financial men at the head of insurance companies that are

poor insurance men and vice versa, there are sometimes great insurance men that are poor financiers, but in Mr. Chase's case, he combined both. He was a financier of the highest quality. I do not believe any company, from the day that George L. Chase took hold of the Hartford has made as remarkable a record.
"In the panies of '90 and '91, Presi-

dent Chase assisted me by introducing mo to bankers in the east," said Presi dent Grant, "that I might obtain hel for our corporations out here in Utah and in the death of Mr. Chase I feel as though not only a warm personal friend, but a friend of the entire peoole of Utah has been called away from

STATE POULTRY FAIR.

Expected That 1,000 Birds Will be on Exhibition Beginning Jan- 15.

The Utah State Poultry association has found quarters for its annual exhibition at 322 South Main street, below the Walker Bros.' store. A beginning will be made Saturday, in putting the birds in place, and the scoring begins Monday, extending through Tuesday, so the opening can be made on Wednes-day, Jan. 15. The indications are that will be at least 1,000 birds on exhibition, exclusive of 100 pairs of pigeons. A special feature will be the Rhode Island Reds of which variety there are promised over 200 birds, which made quite a showing at the last state fair. The officials of the association are confident that this dis-play will be the best ever made in this

MAY HAVE LENSE FACTORY.

Plans for Establishment of Large Works in City Being Exploited.

A prominent local optician says relative to the recent New York dispatch stating it was proposed to establish in this country a "Blank" manufactory—that is, for the manufacturing of lense that is, for the manufacturing of lense glass in the crude; that such a factory has already been established, in western Pennsylvania where a large amount of work is being done; also that there is some expectation of the establishment in Salt Lake of a similar plant, though on a smaller scale, by eastern parties. Until recent years, German manufacturers have had a monopoly of this business, and the attempt to force prices upward by importers will hasten the further development of the business in porters will hasten the further development of the business in the United States. The process for making the crude article is quite elaborate and delicate, calling for special skill in manipulation, the product being what chemists would term, "chemically pure," that is, absolutely free from flaws or any imperfection. The "blanks" are sawn into small circular slabs about 1½ inches in diameter, from which the manufacturing optician grinds lenses according to pre-scriptions from the oculist. Sometimes the slabs come ground on one side, Owing to the increasing number of the sians con-owing to the increasing number of cases of defective vision in this coun-try, not only among adults, but among children, the demands of the trads are continually increasing, and the busi-ness branching out. Poor light and ness branching out. continually increasing, and the busi-ness branching out. Poor light and desks improperly placed with reference to light, in American school rooms, are said to be responsible for the growth of defective eyesight among the young.

maintaining on its premises a night school for the study of optical science, with an instructor of 30 years exper-lence from Chicago. There are 30 students who appear much interested in the valuable instructions offered

LORCH COMPANY DISBANDS.

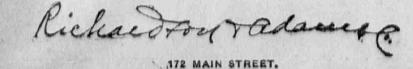

The Theodore Lorch company, which for a period of two or three years, has been playing in and around Utah, was disbanded in Denver last Saturday night, at the close of a performance in that city. Mr. Lorch is now in Chi-cago, selecting a company for an ex-tended presentation of "The Lieutenant tended presentation of "The Lieutenant and the Cowboy," a play written expressly for him, and which was presented in Salt Lake during the early fall. Manager Pelton of the Western Theatrical circuit is at the present time in New York, arranging for a number of heavyweight melodramas, to be put on in stock by Mr. Lorch and the company that he is now choosing. the company that he is now choosing, during the coming summer.

Reductions on everything, even Hart Schaffner & Marx Clothes.

UTAH COULD LEAD GREAT FACTS FOR AS DAIRYING STATE

Everything Favorable to Advance In All Lines in Growing Industry.

FOOD LAWS BRING BENEFITS.

Manufacturers Here Have No More Competition from Makers of Adulterated Foodstuffs.

"There is no physical reason why Utah should not become one of the leading dairying states in the west. The winters are short and comparative ly mild, the summers only moderately warm, the nights cool and pleasant water is abundant and of excellent quality and good grazing can be had six months out of the year." With this statement the report of State Food and Dairy Commissioner John Peterson is introduced. The report covering a year's work in the commissioners' as submitted to Gov. John C. Cutler morning.

In speaking of dairying, the commis-In speaking of dairying, the commissioner declares that great advances have been made along all lines in the industry during the year. Centralization seems to be the center of interest, he says. There is a demand for large central stations where farmers may dispose of their milk for distribution. Many such stations have appeared in the last year, the report declares, and much success has attended in each instance. The building of factories for the manufacture of dairy products, the report sets out, will soon become great factors in the industrial prosperity of the state. In the 176 creameries in In the 176 creameries in spected during the year Mr. Peterson declares he has found marked improve-ment over methods and practises of past years.

QUALITY OF BUTTER BETTER.

Mr. Peterson speaks in high terms of Mr. Peterson speaks in high terms of the results that have been accomplish-ed in the enforcement of the new food law requiring the maker's name on the package and itsweight. He suggests that an amended law should prescribe the amount of moisture to be permitted and also requiring that it be designated

on the package.

There are 27 factories in the state where tomatoes, fruits, peas, beans and other farm and garden products are other farm and garden product are handled and prepared for market in canned form. The factories employ 750 people and the average dally payroll has been \$1,500. The commissioner says \$00,000 cases of canned goods says 800,000 cases of canned goods have issued from Utah factories in the

The commissioner's report states that 175,000 cases of Utah made condensed milk have issued from the state's facries during the year. He points to tories during the year. He points to this as an important and new industry within the state. A new condensary is to be opened soon in Sanpete county and is expected to add largely to the annual output of Utah factories.

Butterine in large quantities has been shipped into the state during the year to offset the scarcity of butter. He declares that this article of food has been of uniformly good quality.

SLAUGHTERHOUSES BAD.

During the year Mr. Peterson has inspected 16 slaughterhouses and in inspected 16 slaughterhouses and in nearly every case he found the condi-tions presented to be most unsanitary. He has issued the necessary orders to remedy the conditions and declares that at the expiration of the at the expiration of the time limit given in each case, if the conditions do not satisfy him, he will bring action in the courts to enforce the pure food

During the year the inspector inresult of his visits 980 pounds of meat and 500 pounds of sausage were con-demned. Fresh meat, pork loins and demned. Fresh meat, pork loins and poultry amounting to 14,000 pounds was indemned during the year and de-

Pure food provisions in the new laws have driven 12 grades of lemon extracts from the market and in the same man-ner eight grades of vanilla have also disappeared. The operation of the rederal cure food laws has greatly bene-fitted Utah manufacturers in that the same requirements are made of eastern and western manufacturers as are obtaining in this state. Inferior goods, therefore, are no longer in competition with honest goods manufactured at

home.

In conclusion the commissioner declares that regular bulletins will be issued from his office at intervals containing information for the public as to what foods offered for sale in the markets of this state are impure and adulterated. He will also issue a pamphlet on the care of milk.

COASTING ACCIDENT.

Ralph McClane Breaks His Leg While Riding on a "Schooner."

While coasting down the hill near P street, about 11 a. m. today, Ralph McClane, aged 14 years, received a broken leg, and is now in St. Mark's hospital. The boy, with Harry, Hilton, son of Officer William Hilton, was on a large "schooner," which collided with a delivery wagon. Hilton and the others jumped and saved themselves, but young McClane was not in a position to avoid the collision.

VOUGHT NOT GUILTY.

J. A. Vought, charged with stealing three bales of hay from his employer, was found not guilty this afternoon. Vought had his arraignment yesterday before the city police court.

UTAH FARMERS

And Good Materials for School Lessons in Agriculture.

FACTORS IN SOIL FERTILITY.

Proved by Simple Experiments, Before Nature Classes at State Normal.

Great facts for farmers and admirable materials for school lessons in agriculture, were presented vesterday before the nature study classes at the state normal by Prof. Hogenson of the Agricultural college. Certain factors in soil fertility was

the theme. The demonstration and lecture was a continuation of the previous lecture, which considered the plant food in the soil. This lesson deals with the necessity of having sufficient humus, oxygen, and heat in the soil.

HUMUS IN SOIL.

Humus is the product of decaying organic matter. It is that which usually gives to the soil its dark color. Where the soil is warm during the whole year, and in dry climates where the soil is open on account of the small amount of moisture received, and also in sandy soils, the rate of complete decay is so rapid that the amount of humus produced is very small, Where the soil is damp and the rains frequent, the organic matter decays more slowly, and the amount of humus is relatively greater. Humus is quite insoluble under field conditions, so that it does not leach away. Of itself it is of no use to plants; but it becomes the food of bacteria, which by degrees convert it into soluble forms so that plants can use it. The humus of the soil is increased by Humus is the product of decaying or-The humus of the soil is increased by adding manure, and plowing under green crops and stubble.

FINDING THE HUMUS.

experiment to determine the amount of humus in a soil may be per-formed by taking a small quantity of soil as it is found in the field. First weigh the sample and dry it in a modweight the sample and try in a survey erate oven or on the back of the stove. When it is dry, weigh it again. Now place this dry soil upon a coal shovel above hot coals. The humus in it will begin to smoke. If the soil is kept very hot for two or three hours, practically all of the humus will be burned, leaving only the mineral part of the soil. What all of the humus will be burned, leaving only the mineral part of the soil. What remains should now be weighed, and the amount per acre and the per cent of humus in the soil determined. In these calculations, take 4,000,000 pounds as the weight of soil per acre, and determine the weight of organic matter in an acre of the soil tested.

SOILS NEED OXYGEN.

We have already spoken of the neces sity of oxygen in the soil, when considering both the moisture and the plant food factors. Practically all of our farm crops need a good supply of oxygen. A soil that is well drained and open, so that air enters it freely, has more bacterial life and consequently a more bacterial life and consequently a higher degree of fertility than a close-grained, air-tight soil. Air may pene-trate the soil to a depth of many feet, depending upon the openness or air spaces between the soil particles. The rapidity and degree of seed germination in the soil and growth of the plant later depend largely upon the supply of aye. depend largely upon the supply of oxy-gen held by the soil. Soils are made light and open chieffy by cultivation.

PROVING THE THEORY.

An experiment to show that heavy clay soils are materially improved by making them lighter so that air can enter more freely, can be made by tak-ing a pair of two-gallon cans, and filling both with a heavy clay soil, Mix the soil in one can with finely cut straw or coarse sand, which will have a ten-dency to loosen or lighten it. Pack down with the hand. Let both stand for a week. Then plant 10 kernels of oats in each can, and note the difference in the growth of the resulting plants, both as to the time of coming up and the ra-pldity of growth afterwards. The plants in the can containing the soil lightened with straw or sand will come up first, will grow more rapidly, and in every way will be better plants than those in the other can. The oxygen in the looser soil has aided the growth of the plants.

SOILS SHOULD BE WARM.

A certain degree of heat is neces-sary in the soil before any of the chemical biological, or physical changes which are necessary to the develop-ment of plant foods in the soil can go on. When the temperature falls to 32 degrees F, nearly all the life processes cease. Experiments have shown that, with most cultivated crops, growth does not begin until a temperature of 45 degrees F, has been reached, and that it does not take place most vigorously until after a temperature of 68 degrees F has been reached. There is a certain degree of temperature at which seeds germinate most rapidly and produce the most vigorous plants. Prof. King has worked out a table showing the best soil temperature for a number of

crops. It is as follows:

Wheat, 83 degrees fabrenheit; barley, 84 degrees; peas, 82; corn, 93; beans, 79; squash, 93; clover, 70; turnips 89; melons 99.

HEAT IN WET AND DRY SOILS.

A dry soil will become warm in the sunshine much more rapidly than a moist soil water is continually being evaporated by the sun, and this process keeps down its temperature. Moreover, soil becomes warm by the application of less heat than does water. Take 100 pounds of water at a temperature of 32 degrees. To raise its temperature one degree, a certain amount of heat will degrees. To raise its temperature one degree, a certain amount of heat will be required. If, now, we take this same amount of heat and apply it to 100 peunds of loamy soil, its temperature will be 38.65 degrees. If we repeat the experiment with sand, its temperature will be 41.92. This shows that soil is more easily heated than water is; hence, a wet soil is a cold soil.

EFFECT OF GOOD TILLAGE.

When a field is left very uneven and lumpy the heat of the surface soil is rapidly lost in warming the air above, and the result is that the deeper soil remains cooler. Good tiliage prevents the escape of heat by keeping in the soil moisture. This large amount of heat which would ordinarily be used to evaporate water is then retained in the soil. Good tiliage, then, saves heat as well as water. as well as water.

A TEMPERATURE EXPERIMENT.

To show that temperature plays an important part in seed germination and plant growth, get four cans and fill them with the same kind of soil; then them with the same kind of soil; then add sufficient water to bring the soil to the best condition for plant growth. Plant wheat in all of the cans; place three of them either in the warm sunshine or near the stove; place the fourth in a rather cold place. Note the difference in the time it takes for the plants to come up in the cold and warm cans. The plants in the three warm cans will be up a long time before those in the cold soil will appear. Now take one of the three cans that has been in a warm place and put it

Put a box of McDonald's Dutch chocolates in your pocket when you start home this even ing. It will give a whole evenings' pleasure to the family. McDonald, Salt Lake, exclusive manufacturer of fine chocolates.

by the can in the cool place. It will then be found that the plants will practically stop growing, or at least will grow very slowly, while the plants in the two cans still remaining in the warm place will continue to grow rapidly and develop well.

VARIETY OF CROPS AND FOOD.

VARIETY OF CROPS AND FOOD.

Let us now consider the benefits derived from erop rotation; that is, by following one crop with a different crop, instead of growing the same crop year after year upon the same land.

In animal feeding, a frequent change of food and a variety of foods have been found very beneficial. No matter how complete and well balanced a particular food may be, or how well it may be relished at first, it soon becomes tiresome unless a rotation of other foods of sufficient variety and frequency is provided. Undoubtedly the prolonged use of a single article of diet without change will introduce substances, or will set up changes or conditions in the body which seriously interfere with its normal functions. A change of the body which seriously interfere with its normal functions. A change of diet provides time and opportunity for the elimination of these objectionable products, and for the overcoming of unfavorable conditions. It does not appear improbable that a crop grown long upon the same land might introduce into the soil both substances and conditions which become, by accumulation inturious to the growth of the conditions which become, by accumulation, injurious to the growth of the particular kind of crop which produced these substances or conditions, while to another crop they might be harmless or even beneficial.

PLANTS POISON THE SOIL.

The bureau of soils of the department of agriculture at Washington has recently done a great deal of work upon this phase of soil fertility. The investigators have come to the conclusion that each crop gives off a toxic or poisonous substance, which is injurious to the particular crop that produced it. It thus makes the soil unsanitary to that particular crop which therefore refuses to grow normally, or sanitary to that particular crop when therefore refuses to grow normally, or not at all. Crop rotation is not much practised in the west. The same crop is usually grown upon the same land year after year, as long as it will grow at all. This is a great mistake in our agriculture. agriculture.

SYSTEM OF ROTATION. The systems of rotation which have

The systems of rotation which have been practised and pronounced satisfactory under different conditions and in all varieties of soils, usually consist of (1) some crop which only partly covers the ground and which permus cultivation through a full half or more of the growing season; as corn, potatoes, beets; (2) some leguminous crop, like beern or clover, which favors the like lucern or clover, which favors the like fucern or clover, which lavors the fixing of free nitrogen from the air; and (3) some crop like grain or grass, which completely covers the field. The grains and grasses fully use up both the nitrates and the other salts. The leguminous crop also uses up foods but permits the production of more organic nitrogen. Cultivated or hold crops like corn, potatoes and roots, while they consume the nitrates already while they consume the nitrates already in the oil, permit excellent facilities for the production in the soil of more than they use by changing them to available forms. It is, therefore, a rational practise to follow a cultivated crop with grain, in order to make use of the accumulated plant foods. Grain the soil they be followed with present or of the accumulated plant foods. Grain should then be followed with ucern or clover in order to accumulate a fresh supply of nitrogen from the atmosphere. Finally the leguminous crops should then be followed with lucern or corn, which provide favorable conditions for the development of nitrifying organisms by reason of the frequent cultivation which these crops require.

A ROTATION EXPERIMENT.

A very instructive experiment illustrating the benefit of rotating crops may be carried on on any piece of should be followed with potatoes or containing a square rod. Have them both plowed or dug up and otherwise handled in the same manner. Sow one both plowed or dug up and otherwise handled in the same manner. Sow one ground. Use two plats of ground each to wheat every year for a number of years, and rotate crops on the other as follows: First two years lucern, third year potatoes or corn, fourth year wheat, fifth year sow again to lucern. At the end of five years, figure up the products. You five years, figure up the products. You will find that the greatest value has been realized from the rotated plat, while the soil is also in a much better condition on that plat at the end of that length of time than on the other. EXPERIMENTS IN GERMINATION.

Two very instructive experiments can be performed illustrating first, the germinating power of seeds, and sec-ond, the proper depth to plant seeds of various kinds.

of various kinds.

To test the germinating power or vitality of seeds, take two common plates; upon one put a little sawdust and over this place a piece of flannel. Thoroughly moisten the sawdust and flannel. Now count out 100 seeds of the variety you wish to test just as they come, poor and good alike. Place them on the wet flannel and cover with another piece of wet flannel. Put the plate over this one, and set it in a modanother piece of wet flannel. Put the plate over this one, and set it in a moderately warm place. After 48 hours, count and remove all the sprouted seeds. Do this each day for five days. After this time, all the seeds that will sprout will have done so, and the percentage of germination can be calculated. It will be necessary to add water from time to time so as to keep the flannels and sawdust damp. Good seed should have a germinating power of should have a germinating power of from 90 to 98 per cent. To test the proper depth to plant seeds, fill a tall bottle with soil and place seeds at various depths such as 1, 2, 3, 4, 5 and 6 inches. Place them near the glass, so their progress may be seen through the sides. Wrap the bottle in black paper; which chould be taken off only when sides. Wrap the bottle in black paper; which should be taken off only when examining the seeds. The paper keeps out the light, so that the seeds will germinate naturally and the resulting plantlets develop normally. As the plants progress, the exepriment will readily show what depth of planting produces the best plants.

SEELEY'S RECORD.

Varsity Guard Tells of His Participation in Various Forms of Athletics.

Carrol C. Seeley, guard on the University of Utah football team during the past season, feels that his athletic standing as an amateur, and a man with a perfect right to play in the undergraduate game, has been wrongfully attacked in Salt Lake, and that the impression that there is reason for keeping him out of athletics, is an erroneous one.

In a statement made to the "News"

today, Mr. Seeley declares that he was not induced to come here from Ely, Nevada, to play football, but was at-tracted to the university this fall by

Nevada, to play football, bilt was altracted to the university this fall by the opportunity to take a course in Spanish, which would fit him for work in Cerro de Pasca. He came here from Ely to apply for a place in the Peruvian mines, but on being told to wait a while, he decided to study Spanish, applied to the university for entrance, and not until he had been here two weeks did he think of football.

"My entire athletic record is an open one, and can easily be secured," declares Mr. Seeley. "My home is in Portland, and there I early became interested in athletic events. My first appearance was with the Multnomah Athletic club when I was 17 or 18 years old. I took the middleweight amateur championship of Portland in 1896. I was fullback and captain of the Portland academy prep. school football team, in the same year, also first base-

man on the baseball team of this

academy.

In this same year I pulled number 3 In this same year I pulled number 3 on the Portland Rowing club junior four, and represented the club on the track team, running the half mile.

In June, 1897, I graduated from Portland academy, and went to Williams college in the fall. My first will I didn't make the 'Varsity, but played on the freshman team. The next two years at Williams I made the 'Varsity, and the following year—1900 I sity, and the following year-1900 I went to Stanford, where I made the

After that I went to the East Indies, China and Japan for three years, work ing for a mining company. In summer of 1902 I played first base

ling for a mining company. In the summer of 1902 I played first base on the Shanghal baseball team, an American ball team in China.

In the fall of 1904 I played right guard on the Multnomah Amateur Athletic club of Portland. Then I came down to Nevada to work as a civil engineer, and remained there and in western Utah, until this fall, when I came to Salt Lake. Then I played here on the football team, after entering the university, to remain pending the opportunity to go to Peru.

"As to the one-year rule, which it is claimed would debar me here," I am eligible to play on Yale football team itself, or Harvard, or any team. The year-rule applies to students transferring from other colleges, and I have not been in college within a year

transferring from other colleges, and I have not been in college within a year before coming to Salt Lake, while I have credits that would admit me to junior standing anywhere in the coun-

WAS RAILROADED."

Former Dean Eddie Claims He Was Victim of Conspiracy.

Late this afternoon the findings of the ecclesiastical court in the case of ex-Dean J. B. Eddie will be made public. The accused has prepared an laborate statement, which will be read before sentence is passed.

Mr. Eddie claims in the document alluded to that he did not have a fair

and impartial hearing and that he was railroaded through to conviction. He nakes the further allegations that the charges were brought against him by persons who were prompted solely by jealousy and that there existed a con-spiracy among certain individuals to bring about his undoing, either by fair neans or foul, Sentence will be passed by Bishop

Spalding at 4 p. m. in a room of St. Mark's cathedral. As the doors will be open to the public, it is expected that many persons will avail themselves of the privilege of being present.

DR. BEATTY ON WAR PATH.

Hot on Trail of Alleged Violator of Quarantine Regulations.

A well known Main street business man, in riding down town this morning,

in a street car, got to talking with an

acquaintance who referred to the presence in Salt Lake of so much scarlet fever and diphtheria, and the unpleasant experiences he had been subjected to while in quarantine while the fever was present in his household. To his surprise and some consternation, the Main street business man remarked in the most casual way that several of his children were just broken all out with a bright scarlet rash. "Of course you at once called in a physician," immediately asked the acquaintance. "Oh, no," was the reply; "we're Christian Scientists." "Then you have taken no precaution whatever to protect the community from possible infection through scarlet fever!" The other party did not seem to think it at all necessary, and acquaintance who referred to the presseem to think it at all necessary, and passed the matter off, as though it was of no consequence at all. The citizen who had been through quarantine, straightway proceeded to express himself on the subject in terms of a vermillion hue, and wanted to know how it could be that he himself should be compelled to go through the ligors of quarantine, when this party was going scotfree, with scarlet fever probably raging in his family. The situation was at once reported to Secy, Beatty of the state board of health, who proceeded to go immediately on the war path. He declared his positive intention to handle this case without the intervening mecompelled to go through dium of gloves.

ELECTS DIRECTORS TONIGHT.

M. & M. Association Will Select Five Two Year Term Officers.

The M. & M. association will elect ive new directors this evening. The following 10 directors were elected for two years and have yet one year to

serve:

BURGESS SAYS HE SHOT. In another column is a report of the

arrest of City Councilman J. D. Murdock for shooting his gun, while duck hunting, after sundown. Today duck hunters, who are much exercised over the arrest, held a general indignation meeting in the Western Arms store, and during the talk, Dorcey Burgess put forward a claim that he fred the three shots which were referred to in testimony on which Councilman Murdock was convicted.

"It was not after sundown," declared Burgess. "If a court will say it was, I will gladly pay the fine. I am not a hunter to disregard the game laws.

LATE LOCALS.

Bank Clearings—Today's local bank clearings amounted to \$463,452.55 as against \$1,140,844.51 for the same day last year.

Compiled Laws Appear—The advance sheets of the compiled laws of Utah have come from the press. The first volume contains about 500 pages while the completed volume will contain about 1,600 pages. It will be bound in law sheep. The advance sheets show remarkably fine typographical work, both as to composition and impression. The revision and compilation is being done by J. T. Hammond, former secretary of T. Hammond, former secr state, and Grant H. Smith.

Juveniles in San Juan—Wilme Bronson, probation officer for the Seventh judicial district at Monticello, Say Juan county, has filed his report with Gov. Cutler as ex-officio chairman Gov. Cutler as ex-officio chairman of the juvenile court commission. The report is very brief and simply state that in his work as probation offices he has found it necessary only to be kind to wayward juveniles, caution, ing them and advising them as to proper conduct. It has not been necessary to bring any child before the court for delinquency.

court for delinquency.

Bransford's First Message—Mayor Bransford's first message to the city council is almost ready for the recorder and will be presented to the council at its first regular meeting next Monday night. Owing to the lateness of the arrival of reports from the heads of several city departments there is much that the mayor is unable at this time to incorporate within his report. Later, probably within two or three months, he will submit a supplemental report carrying much information as to statistical and financial summaries.

PERSONAL.
